**METHOD FOR DETECTING STRAIN STATE OF TIRE, DEVICE
FOR DETECTING STRAIN STATE, AND THE TIRE**

REASONS FOR ALLOWANCE

The following is an Examiner's statement of reasons for allowance:

Claim 1 has been found to be allowable because the prior art fails to teach or suggest a tire distortion detecting method in which a plurality of conductor pieces embedded in lines at predetermined intervals in a circumferential direction of the tire are embedded in two or more different layers, and a monitoring device which repeatedly measures time from when the pulsed electromagnetic wave is radiated to when the reflected pulsed electromagnetic wave is received, stores, as a reference value, time at which no distortion occurs on the tire, and compares the measured time with the stored reference value to detect a distortion of the tire.

Claims 2 and 3 have been found to be allowable over the prior art due to the claims' dependency on claim 1.

Claim 4 has been found to be allowable because the prior art fails to teach or suggest a tire distortion detector being constituted of a tire, in which a plurality of conductor pieces embedded in lines at predetermined intervals in a circumferential direction of the tire are embedded in two or more different layers, and a monitoring device which has a means for measuring time from radiation of the pulsed electromagnetic wave to reception of the reflected pulsed electromagnetic wave, means for storing, as a reference value, time at which no distortion occurs on the tire, and means for comparing the measured time and the stored reference value to detect a distortion of the tire.

Claims 5-9 have been found to be allowable over the prior art due to the claims' dependency on claim 4.

Any comments considered necessary by the Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
